1905 Thirty-five Years of Service in 1940

Seeds, Bulbs, Plants

The year 1940 marks the 35th anniversary of Burnett Brothers, Inc., In 1905, George A. Burnett, the active head of the firm today, founded the business at 101 West Street, which was in those days a very busy section of downtown Manhattan. Guided by the founder whose integrity, horticultural knowledge and reliability won him the respect of a large clientele, the enterprise proved to be a success from the start. Mr. G. A. Burnett's personality established a host of friendships, many of which he values highly to this day. After 3 years on West Street, handicapped by a lack of space, the firm moved to 72 Cortlandt Street. Another 6 years found the ever-growing business at 98 Chambers Street. In 1918, our President, capitalizing on a hope he had cherished for years, acquired the entire building at 92 Chambers Street. Here the necessary facilities for carrying on a complete seed business were found, and the firm has continued at this address to the present day. At this time we wish to thank our numerous patrons and friends for their support in the past, and we solicit their continued trade and confidence for the future. Our motto "RELIABLE SEEDS AND PROMPT SERVICE" is more than a mere phrase. It is a standard of efficiency retained through the years upon which our success as seedsmen has been established. Special care is taken that all seeds sent out by us are true to name and of the highest germinating qualities. The fact that we are in constant and close touch with the leading seed growers, nurserymen, etc., of the horticultural world, makes it possible for us to offer you the highest quality merchandise.

WE TAKE PRIDE IN THE FACT THAT

OUR VEGETABLE SEEDS of extra selected stock are procured from the most competent growers in the country.

OUR FLOWER SEEDS are carefully selected from the finest strains obtainable, and have given the utmost satisfaction wherever grown. We have received many testimonials vouching for their superiority.

OUR LAWN SEED MIXTURES have a national reputation for quality. Composed of the finest recleaned grasses, they insure a beautiful velvety and permanent lawn. We stand by our slogan—

BURNETT'S LAWN GRASS SEED MIXTURES

The Satisfaction of a Perfect Lawn

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.,** with a reputation of supplying grass seeds of the highest quality for a period of over thirty years, assume the responsibility of furnishing good seed.

HORMONE-TREATED LAWN GRASS SEED

Plants from Hormone-Treated Grass Seed have nearly three times the root strength of plants from untreated seed

Outstanding among the scientific discoveries of recent years. Extensive experiments have shown that the Hormone Treatment of Grass Seeds will result in **quicker germination** and a marked **increase in root growth.**

The production of this strong, extra vigorous root system (see illustration above) is of vital importance in making a new lawn or renovating an old lawn. The extra stimulant derived from Hormone Treatment is of particular value for late seedings, or where it is necessary to produce an established turf in a relatively short time.

HORMONE-TREATED available in all mixtures at 5c. per lb. additional to listed prices.

BURNETT'S "KILLARNEY" MIXTURE

Burnett's Lawn Grass Seed Mixture "Killarney" is composed of a combination of the finest imported and domestic grasses, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, recleaned seeds of the highest germination. Therefore, owners of large estates requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain **"Killarney Mixture"** will produce a turf of velvet, equal to the most famous lawns in Europe.

In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable, dwarf evergreen, **recleaned** grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

BURNETT'S "SHADY PLACE" MIXTURE

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases an application of lime or wood ashes raked in will sweeten the soil, but the moss should be first removed with a sharp steel-toothed rake. JAPANESE BEETLE GRUBS

Courtesy of U. S. DEPARTMENT OF AGRICULTURE

HAIRY CHINCH BUGS

JAPANESE BEETLE

The most serious lawn insect pest in recent years. The grubs feed on the roots of the grass during May and June and again in August and September. The serious increase of this pest threatens the very existence of our gardens and lawns. Earnest cooperation of all within the infested area in fighting the Japanese Beetle is the only solution to the control of this menace. Grub proofing of lawn areas with **Arsenate of Lead** kills the grubs and safeguards the lawn from damage.

Rate of Application—1 lb. to each 100 sq. ft. Apply either in early Spring or late Summer. Rake in thoroughly. **See page 69 for prices.**

HAIRY CHINCH BUG

The most logical control of this and other lawn pests is through the establishment of various individual grasses which are less susceptible to insect injury. We highly recommend our new **"Permanent Turf"** Formula for this purpose. (*See above*). The most effective chemical controls are either pure **Tobacco Dust or Rotenone Dust** applied at the rate of 2 to 4 lbs. per 100 sq. ft. Application should be made during the hottest part of the day and the material thoroughly brushed in. Applications should be made in early June and in early August. **See page 70 for prices.**

NEW LAWN FORMULA

Prepared Especially For Chinch Bug Infested Areas

PERMANENT TURF

The House Famous for Lawn Grass Seed's Contribution to Home Owners In These Sections

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our **"Permanent Turf."**

Permanent Turf (no Clover). 12½ lbs. $12.00, 25 lbs. $22.00, 100 lbs. $78.00, 500 lbs. $350.00.

Of vigorous growth, it will produce a green sward where nothing else succeeds. It is a small-leaved sort of very prostrate nature. Roots are formed at the joints of all the procumbent stems in addition to the main tap root. The dense creeping habit of this Clover makes it unexcelled as a control for soil erosion as well as an exceptionally nutritous pasture plant.

These novelties and specialties have been selected by us as having a good claim to merit and are well worthy of a trial.

Each year a group of horticultural experts makes a careful study of new floral novelties produced by plant breeders from all over the world. The final decision of this committee on each year's novelties is known as the **All America Selections** for that year. The following list is the selection of the newest in flowers for 1940.

BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers ,sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

Their culture has been entirely too much neglected, but each year as their merits become better known, they increase in popularity.
